## Description

We offer very high quality, tested brass powder from German manufacture  
The purity is 99.9% (occupied by analysis)  
Particle size: D50 34µm  
Particle Shape: Leaf-shaped  
Manufacturing process: electrolytic

The powder is particularly suitable as a color pigment which you can give in water-based binders  
You can add this brass powder to any type of binder (dispersion paint, clear lacquer base, putty)  
Please be sure to have a color-coordinated background, e.g. White if you want to have a good covering power because it will also save metal powder  
But you can also try to try a black background, as a result you can increase the brilliance and the whole looks very noble  
If you take an acrylic binder as a binder, the surface is even washable  
As a mixture ratio we recommend to try 1:10

IMPORTANT: DO NOT grind or polish this pigment, otherwise you would destroy the glow effect  
If you want to use a brass powder for grinding or polishing, we recommend our brass powder 0-45µm or 45-150µm

### Safety note:

Observe the usual precautions when handling chemicals  
The product does not have to be labeled according to EC directives / GefStoffV
